Part I

LeetCode Top Interview Questions

Chapter 1

Easy

Link: [LeetCode Top Interview Questions: Easy section.](#)

1.1 Arrays

Link: [Arrays](#)

1.1.1 26. Remove Duplicates from Sorted Array

[Link to question](#), [Link to submission](#)

Concepts Two pointer

Algorithm description

- Maintain a read pointer and a write pointer, both starting from zero.
- Advance the write pointer until you see a new value or reach end of array.
- Write value at write location into read location.

- Return read.

1.1.2 122. Best Time to Buy and Sell Stock II

[Link to question](#), [Link to submission](#)

Concepts Greedy

Algorithm description

- Construct a consecutive elements difference array
- Return sum of all positive elements in difference array

1.1.3 189. Rotate Array

[Link to question](#), [Link to submission approach 1](#), [Link to submission approach 2](#)

Concepts Cyclic replacements, Implementation

Approach 1 description

- Maintain a visited array and a pointer initialized to 0
- while pointer + k is not visited, replace arr[pointer + k] with arr[pointer]. Update pointer to pointer + k. Set pointer + k to visited, increment a numberOfChanges variable.
- Increment pointer by 1
- Keep doing this while numberOfChanges less than size of array.

Approach 2 description

- Reverse the entire array
- Reverse from start to start + k
- Reverse from start + k to end

1.1.4 217. Contains Duplicate

[Link to question](#), [Link to submission](#)

Concepts Hash Table, Set

Algorithm description

- Initialize a Set
- For an element in array, if element in Set, return true
- else add element to Set
- If out of loop, return False

1.1.5 136. Single Number

[Link to question](#), [Link to submission](#)

Concepts Bit Manipulation, XOR

Algorithm description

- Initialize an answer variable to 0
- For every element, XOR it to answer. Elements appearing twice get XOR'd out to zero

- Return answer

1.1.6 350. Intersection of Two Arrays II

[Link to question](#), [Link to submission approach 1](#), [Link to submission approach 2](#)

Concepts Hash Table, Two Pointers

Approach 1 description

- Form an element:frequency mapping using map for smaller array (to save space)
- Traverse bigger array
- If frequency of element less than 0, add to answer. Decrement frequency

Approach 2 description

- If arrays are sorted, use two pointers p1 and p2
- If $\text{nums1}[p1] == \text{nums2}[p2]$, add to answer and increment both
- Else if $\text{nums1}[p1]$ is smaller, increment p1. Else increment p2
- Keep doing until reach end of either array

1.1.7 66. Plus One

[Link to question](#), [Link to submission](#)

Concepts Array

Algorithm description

- Initialize a carry variable to 1
- Traverse array from the end.
 $\text{digit}[i] = \text{carry} + \text{digit} \bmod 10$, $\text{carry} = \text{carry} + \text{digit} \text{ div } 10$
- Finally, if carry is not zero, insert carry at start of array

1.1.8 283. Move Zeroes

[Link to question](#), [Link to submission](#)

Concepts Two Pointers

Algorithm description

- Maintain a read and a write pointer, both initialized to 0
- if read end has zero, increment read end
- else, copy read end to write end and increment both
- After read end reaches end, set all numbers from write end to end as 0

1.1.9 1. Two Sum

[Link to question](#), [Link to submission approach 1](#), [Link to submission approach 2](#)

Concepts Hash Table, Two Pointer

Approach 1 description

- Create an element:indices mapping
- Sort the array
- Use two pointers to search for a particular sum
- Once you find the sum, pop index from left pointer, and pop index from right pointer
- Return indices

Approach 2 description

- Create a hashmap of int, int
- Iterate the array with i as looping variable
- If element in hashmap, return (hashmap[element], i)
- Else insert hashmap[target - element] = i

1.1.10 36. Valid Sudoku

[Link to question](#), [Link to submission](#)

Concepts Hash Table, Set

Algorithm description

- Create sets to hold numbers for each row, col and square.
- Traverse the sudoku
- If a number is already in the row, col, square, return False
- Else, come out of loop and return true

1.1.11 48. Rotate Image

[Link to question](#), [Link to submission](#)

Concepts Array, Circular Permutation

Algorithm description

- Do a counterclockwise circular permutation as mentioned in solution
- Pure implementation problem. No algorithmic skill.

1.2 Strings

Link: [Strings](#)

1.2.1 344. Reverse String

[Link to question](#), [Link to submission](#)

Concepts Two Pointers

Algorithm description

- Set a left pointer to start of string, right pointer to end
- Swap left and right. Increment left, decrement right
- Do while l less than r

1.2.2 7. Reverse Integer

[Link to question](#), [Link to submission](#)

Concepts Two Pointers

Algorithm description

- Reverse the integer by converting to a string
- Store result in long
- If stored result is outside integer limits, return 0
- Else return the reversed number

1.2.3 387. First Unique Character in a String

[Link to question](#), [Link to submission](#)

Concepts Hash Map

Algorithm description

- Construct element frequency mapping
- Traverse the string from the start, if frequency of a char is 1, return index
- If reach end of string, return -1

1.2.4 242. Valid Anagram

[Link to question](#), [Link to submission](#)

Concepts Hash Map, Counting Sort

Algorithm description

- Traverse through s1, incrementing frequency counts
- Traverse through s2, decrementing frequency counts
- If all counts are zero, return true. Else false.

1.2.5 125. Valid Palindrome

[Link to question](#), [Link to submission](#)

Concepts Two Pointers

Algorithm description

- Maintain a left and a right pointer
- Before comparing the two, ensure left and right both are pointing to an alphanumeric character

1.2.6 28. Implement strStr()

[Link to question](#), [Link to Approach 1](#), [Link to Approach 2](#)

Concepts Two Pointers, Rabin-Karp Algorithm, Rolling Hash

Approach 1 description

- Traverse haystack until you find a character matching with first character of needle
- Once match is found, keep checking for further characters until either there's a mismatch or you reach end of arrays
- Return index accordingly

Approach 2 description - Rabin-Karp

- Hash the needle using a hash function that is easy to be "rolled", that is it is easy to compute hash for next window if hash for previous window is known
- Traverse the haystack using window of length `needle.length()`. Hash the window and compare with needle hash. If matched, return the index of start of window
- See implementation carefully, very interesting. Also see [LeetCode solution article](#).

1.2.7 38. Count and Say

[Link to question](#), [Link to submission](#)

Concepts Recursion, Two Pointers

Algorithm description

- Base case: $n = 1$, return "1"
- Get the answer for $n-1$
- Traverse through answer of $n-1$
- For each consecutive list of same elements, add the count, followed by the element
- Return answer

1.2.8 14. Longest Common Prefix

[Link to question](#), [Link to submission](#)

Concepts Implementation

Algorithm description

- Initialize answer string to ""
- Find length of smallest string
- For i from 0 to $\text{min length} - 1$
- Traverse through all the characters at i th positions
- If different, return answer
- If same, add character to answer

1.3 Linked Lists

Link: [Linked Lists](#)

1.3.1 237. Delete Node in a Linked List

[Link to question](#), [Link to submission](#)

Concepts Trick

Algorithm description

- Copy value of next node into current node
- Set next ptr of current node to next ptr of next node

1.3.2 19. Remove Nth Node From End of List

[Link to question](#), [Link to submission](#)

Concepts Two Pointer

Algorithm description

- To do it in one pass, let a forward pointer advance n steps
- Then, start forwarding a slow pointer as well as the forward pointer one at a time until forward reaches the end
- delete the slow pointer node

1.3.3 206. Reverse Linked List

[Link to question](#), [Link to iterative approach](#), [Link to recursive approach](#)

Concepts Implementation

Approach 1 description

- Initialize a `prev = NULL`, and a `curr = head`
- While head is not NULL, do a cyclic swap between `curr.next`, `prev`, and `curr`.
- Return `prev`

Approach 2 description

- If head is NULL or head.next is NULL return head
- `l = reversed list for head.next`
- `head.next.next = head`, `head.next = NULL`. Return `l`

1.3.4 21. Merge Two Sorted Lists

[Link to question](#), [Link to iterative submission](#), [Link to recursive submission](#)

Concepts Two Pointers

Algorithm description Iterative

- Make a dummy node, and let `tmp = dumminode`
- Keep appending the smaller of the two lists to the dummy node and advance the pointers accordingly
- If one of the lists becomes NULL, append the other list to dummy node
- Return next of `tmp`

Algorithm description Recursive

- If either of lists is NULL, return the other
- if l1 is smaller, get answer to (l1.next, l2) and set it as l1.next. Return l1
- Else get answer to (l1, l2.next) and set it as l2.next. Return l2

1.3.5 234. Palindrome Linked List

[Link to question](#), [Link to submission](#)

Concepts Reverse a linked list, Two Pointers

Algorithm description

- Reverse the second half of the linked list
- Compare nodewise the head of linked list and the head of reversed list to check for palindrome

1.3.6 141. Linked List Cycle

[Link to question](#), [Link to submission](#)

Concepts Hare and Tortoise, Two Pointers

Algorithm description

- Initialize a slow and a fast pointer
- Advance slow by 1, fast by 2
- If slow and fast meet, there's a cycle. Else if fast reaches end, there's no cycle.

1.4 Trees

Link: [Trees](#)

1.4.1 104. Maximum Depth of Binary Tree

[Link to question](#), [Link to recursive submission](#), [Link to iterative submission](#)

Concepts Recursion, Stack

Algorithm description Recursive

- If root is null, return 0
- Else return $1 + \max(\text{maxDepth}(\text{left}), \text{maxDepth}(\text{right}))$

Algorithm description Iterative

- If root is null, return 0
- Initialize stack holding pair of TreeNode and depth
- Push {root, 1}
- While stack is not empty, get top of stack
- If top is leaf, compare with maxDepth
- Push children if any with $\text{depth} = 1 + \text{parent depth}$
